ENDURA

September 2026 Update

Snowy River Gold Mine

Under construction to deliver low-cost gold production of 50 – 60koz per annum over a 10+ year mine life

Sustainability

Health & Safety: There were zero recordable injuries in September and Snowy River has now been Lost Time Injury (LTI) free for over 14 months.

An Emergency Underground Response Drill was completed during the month with everyone responding as planned and demonstrating excellent preparedness.

Environment: All environmental monitoring was completed in line with our consent conditions.

Stakeholder Engagement: Community information sessions were held in Westport, Greymouth and Reefton to share our progress and answer questions – thank you to everyone who came along!

Endura welcomed senior representatives from Ngati Waewae for a site visit in September which included a presentation of the project milestones and a site tour. We value this important partnership.

Construction Projects

We continue to make good progress on the processing plant. The primary crusher and fine ore bin are nearing completion, three Tasman Tanks are now in place for water storage, and the ball mill shell has been installed.

The foundations for our 33kV substation are complete. The switch room has arrived and is ready to be installed.

Operations

Mining: We were delighted to welcome Macmahon Mining New Zealand as our underground mining contractor on 1 October 2026. Together, we're focused on safely ramping up development in preparation for gold production.

Endura and Macmahon share a common objective of maximising opportunities for local workers, businesses and contractors, while building a skilled and sustainable workforce that supports the long-term success of the Snowy River operation and the broader West Coast community.

Geology: Underground diamond drilling has recommenced. Our exploration team achieved early success with drill hole SRD225 intersecting 0.8m of sheared laminated quartz 50m up-dip from known Christmas Reef mineralisation. Assays are pending and further drilling is planned.

People and Culture

Recruitment: We welcomed 17 new members to the team in September who bring with them great skills, experience and fresh ideas to Endura and the Snowy River team.

We're also actively working with our local communities to raise awareness of the pathways and career opportunities on offer at Snowy River.

We're hiring: Processing Plant Operators, Processing Supervisors, Mine Geotechnical Engineer
